PROFILE

Computer Science student focused on full-stack development, with hands-on experience shipping frontend and backend systems: a live adaptive English assessment platform and an offline satellite change-detection system built for a Ministry of Defence problem statement. Interested in Generative AI, LLMs, and agentic systems.

EDUCATION

Galgotias College of Engineering and Technology, Greater Noida

B.Tech in Computer Science and Engineering (AIML)

2024-2028 (Expected)

CGPA: 7.25

Dayawati Modi Public School, Raebareli

Central Board of Secondary Education

2024

12th Percentage: 89.6

TECHNICAL SKILLS AND INTERESTS

Languages: C/C++, Python, JavaScript

Developer Tools: Git, GitHub, VS Code, Postman, Docker, Linux

Frameworks: React.js, Node.js, Express.js, FastAPI, Tailwind CSS

Libraries: OpenCV, NumPy, FAISS, MapLibre GL JS, GSAP

Cloud/Databases: MongoDB, MongoDB Atlas, Firebase

Soft Skills: Team Collaboration, Communication, Adaptability

Coursework: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, Cloud Computing, Artificial Intelligence

Areas of Interest: Artificial Intelligence, Generative AI, LLMs, Agentic AI, Full-Stack Development

PROJECTS

Fluenci – Adaptive English Assessment Platform [Live]

2026

Adaptive communication assessment that ranks users on the international CEFR scale

- Tools & technologies used: Next.js
- Built and deployed an adaptive English communication assessment platform, live at fluenci.in, that evaluates a user's proficiency and ranks them on the international CEFR scale (A1–C2).
- Designed the assessment flow to adapt to each user's performance, so that learners at every level receive a result mapped to a globally recognised standard.

BHU-DRISHTI 2.0 – Satellite Change Intelligence Platform [GitHub]

2026

Offline multi-temporal change detection, semantic search and analyst Q&A (Ministry of Defence PS 26227)

- Tools & technologies used: React.js, Vite, MapLibre GL JS, Python, FastAPI, OpenCV, rasterio, RemoteCLIP, FAISS, MongoDB (GridFS)
- Rebuilt the original BHU-DRISHTI (before/after RGB change detection) into a multi-date Sentinel-2 pipeline using real spectral indices (NDVI, NDWI, NBR, BSI), cloud masking and sub-pixel co-registration to classify changes into 6 land-use categories with explainable confidence scores.
- Added semantic text and image search (RemoteCLIP + FAISS), a deterministic natural-language Q&A agent with cited answers, and a review queue with audit trail, with all analysis running fully offline against a local database.

Personal Portfolio Website [GitHub] [Live]

2026

Responsive developer portfolio with animated and interactive user interface

- Tools & technologies used: React.js, JavaScript, Tailwind CSS, Shadcn UI, GSAP
- Developed a responsive portfolio application using reusable React components to showcase projects, technical skills, certifications, and experience.
- Integrated GSAP animations, interactive UI elements, and responsive layouts to create a polished user experience across desktop and mobile devices.

CERTIFICATIONS

Full Stack Generative and Agentic AI with Python–Udemy

2026

Data Structures and Algorithms–GCET training

2025-2026

Cybersecurity Fundamentals–IBM

2025

Python Django–SimpliLearn

2025

HACKATHONS

Smart India Hackathon (SIH)

India

Software Development Team Member – Top 45 Teams, College Round

2026

- Cleared the internal college round, with our team shortlisted among the top 45 teams.
- Contributed to the core architecture and backend development of the solution, working with the team on system integration and implementation.
